## Digital Vickers Hardness Tester

- > Automatic Vickers hardness tester adopts the integrated design of panel computer with Windows 7 operating system. CCD image acquisition system, show the indentation image directly on the touch screen and automatically detect the Vickers hardness value.
- > All testing parameters can be selected on the side panel computer. User friendly with touch screen.
- > CCD image acquisition system, shows the image clearly and detects the hardness value by touching the screen.
- > Automatic recognition and shifting between the objective and the indenter, automatically get the Vickers hardness value.
- > Hardness scale conversion function.
- > With USB, VGA and LAN interfaces, the hardness measurement can be print out by USB interface printer.

- > Automatic data save, generate the hardness-depth curve and save as WORD or EXCEL document.
- > With motorized X-Y test table, automatic focusing and automatic measuring, it is the fully automation of Vickers hardness testing.

### Application

- > Suitable for ferrous metal, non-ferrous metals, IC thin sections, coatings, ply-metals, glass, ceramics, agate, precious stones, thin plastic sections etc.

### Reference standard

- > ISO 6507, ASTM E92, JIS Z2244

1) When the indentation diagonal length is less than 0.020 mm, the table does not display the value.  
 2) For intermediate values, the maximum allowable error can be obtained by interpolation.  
 3) About the Micro Hardness Tester value in the table is 0.001mm or indentation diagonal length of the average of 2% of the maximum permissible error given, please select the bigger.
